

Laparoscopic & Endoscopic Equipment

Vétoquinol and Covidien have recognised the growing need for laparoscopic instrumentation in UK veterinary practices. We pride ourselves in being one of the first UK companies to offer equine and small animal laparoscopic equipment and extensive laparoscopic training to UK veterinary practitioners. As laparoscopic surgery proves to be more popular amongst UK veterinary surgeons, we are convinced that it will soon become a standard operating procedure in many veterinary practices. Your practice will benefit from keeping up with the latest surgical trends and developments, attracting new clients and gaining new knowledge and expertise.

Covidien's innovative laparoscopic and endoscopic instruments represent a new generation of instrumentation for today's minimally invasive surgical procedures.

Designed to provide convenience, flexibility and enhance efficiency in laparoscopic procedures, these handsets and instruments are an indispensable addition to the minimally invasive surgical equipment.

Main benefits:

- Shorter post-operative recovery time
- Minimally invasive procedure
- Smaller incisions and smaller wounds

The list overleaf is not an exhaustive list as it represents only a quick reference guide and selection of laparoscopic and endoscopic instruments that are currently available. For more information about other products call our dedicated free practice support line on 0800 169 8197.
